Participants and Commercial Partners

## Roadmap

## About INTERTRADE

**19** yr Since 1999  
**100** companies  
**3,000** Traders

We were aware for many years of changes at the forefront of trading before electronic trading became common in Japan, and provided forward-thinking solutions in businesses such as FX and PTS/ We established a standard for front-office systems as a result of many financial institutions and professional traders using our systems.

We are developing a new platform by combining the experience and know-how we have acquired over the years. Trading technologies are evolving rapidly and digital trading(which generates returns proportional to investment in the latest technology) is becoming the norm. The launch of the Tokyo Stock Exchange next-generation trading system "arrowhead" and price optimization systems have further accelerated the spread of high frequency trading(HFT) and other cutting-edge technologies, and liquidity is clearly decentralized.

In this context, as a long-established trading system provider, we went back to the basic principle of what Best Execution means. We believe our goal is not to deliver a good system, but to provide a Best Execution service.
